

Pre-procedural Testing Algorithm for COVID-19 Positive Patients
(Updated 08/21/2022)

*Patients can exit home isolation based on isolation duration guidance (10 days immunocompetent/mild-moderate disease, 21 days immunocompromised/severe disease). Any procedure done within 21 days of a positive test would require COVID PPE or confirmation of 2 negative tests to document viral clearance. Patients who reach the 21 day milestone should not have any further SARS-CoV-2 testing to document clearance and routine pre-procedural and admission screening should be stopped for 3 months.
